

Flight of the 29mm Rocket

Sunday, September 20th 2009, Tripoli South Florida Field. The 29 mm rocket flew for the first time on an Aerotech G64-7 Reloadable. I used a Rousetech casing. The flight was flawless except the 7 second delay seemed a lot shorter. The chute deployed and recovery ensued.

The second flight was unanticipated when fellow rockethead John P, donated a vintage 12 year old Aerotech F50 T motor. The rocket hammered up immediately on Blue Thunder power, no cato! Unfortunately the ejection charge didn't fire! You get what you pay for – 12 year old motor! Luckily The rocket tumbled down on it's side to a gentle landing – no damage!
